## Ultramarine Blue 462

**Product Description:** The ultramarine blue 462 is the most commonly used blue earth pigment.

**Molecular weight** 862.60578

**M.F.**  $\text{Na}_6\text{Al}_4\text{Si}_6\text{S}_4\text{O}_{20}$ ,

**CAS No.** 57455-37-5

### Property

- The better strict control of chromatic coordinates
- The better strict control of particle distribution
- The better Scatter
- Very Good Heat Resistance
- Excellent Fastness to Light
- No Migratory
- Safety and Innocuous

### Specification

| Item                       | Unit | Specification                |
|----------------------------|------|------------------------------|
| Appearance                 |      | Blue powder                  |
| Purity                     | %    | $\geq 99.0$                  |
| Heat Resistance            | °C   | 280-300                      |
| Volatile content           | %    | 0.1max                       |
| Specific Gravity           |      | 2.35                         |
| Oil Absorption             |      | 30-40                        |
| Moisture Content           | %    | 1max                         |
| Residue(44 micron screen ) | %    | 0.1max                       |
| Sulphur Content            | %    | 0.05max                      |
| Water Soluble Salts        | %    | 0.2max                       |
| Absolute Tinting Strength  | %    | $100 \pm 3\%$                |
| Tinting Shade              |      | Compare with standard sample |
| Average Particle Size      | um   | 1.7-1.9                      |

### Packing

25kgs net per paper bag
