

FASCAT® 4202 Catalyst

Dibutyltin Dilaurate

CAS Registry Number: 77-58-7

Description

FASCAT 4202 catalyst, dibutyltin dilaurate, is a yellow amber, oily liquid.

Applications

FASCAT 4202 catalyst is used to cross-link two-component urethane coating systems for the automotive, industrial, and refinish coatings; to cross-link RTV silicone systems for the caulk and sealants markets; and, also, to cross-link polyethylene/silane co-polymer systems for the wire and cable industry. FASCAT 4202 catalyst, absorbed on silica, is used to cross-link urethane powder coatings for exterior applications. It can be used as a gelling catalyst in the manufacture of flexible and rigid polyurethane foams, coatings, adhesives, sealants and elastomers.

General Characteristics

Properties	Typical Values
Formula	$\text{Bu}_2\text{Sn}(\text{OOC}_{12}\text{H}_{23})_2$
Molecular Weight	631.6
% Sn	18.3
Melting Point °C	-10
Specific Gravity (@25°C)	1.05

Solubility

Soluble in many common organic solvents. Insoluble in water and methanol.

Product Features and Benefits

FASCAT 4202 catalyst is a versatile catalyst that can be used in various urethane cross-linking reactions and silanol condensation reactions. It drives the addition of alcohols with isocyanates to accelerate and complete the formation of urethanes. FASCAT 4202 catalyst is stable to hydrolysis but will hydrolyze in the presence of aqueous caustic at room temperature. FASCAT 4202 catalyst is incorporated into the final product and does not require removal. It is a liquid catalyst for ease of processing.
